

MICROPHONE MULTIPLEXER SYSTEM

The MMP-10 is a 4 microphone battery powered multiplexer. Small, rugged and highly reliable, this unit eliminates the need to move a single microphone or hand-held analyzer around the auditorium. By utilizing the 4 microphones this unit dramatically improves the accuracy of the B-chain alignment.

4 omni-directional, individually calibrated laboratory microphones

4 channel switching multiplexer

Selects any single microphone upon command or automatically scan them sequentially

Switching rates are adjustable

Cables, connections and microphone seat mounts included

Flashing LED low battery indicator

An adaptor of your choice included in the kit

Several adaptor versions available to fit different analyzers

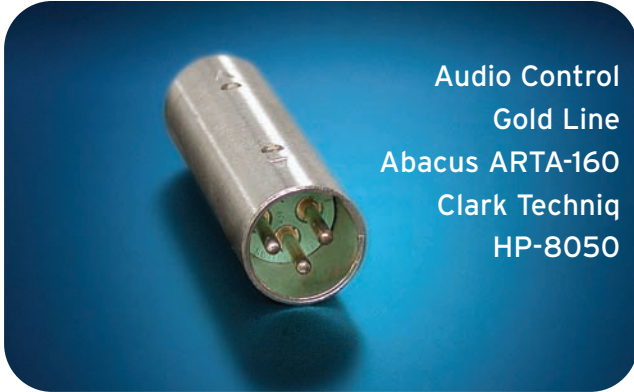

Small package, easy to use and fast to setup

MMP ADAPTOR'S

The MMP-ADS comes standard with each MMP-10 order unless a different adaptor is specified.
