unIFY Control Panel
unD6IO Configuration
The configuration software for the unD6IO is organized into the following key sections:

- Inputs
- Outputs

*Note: Any changes made to device settings will only persist until power is cycled on the device. To retain the settings, they must be stored to Preset 0 using the Save Presets feature within unIFY Control Panel.

Inputs
Dante™ TX Channel Name
This text field reports the Dante™ transmit channel name shown on the Dante™ network for corresponding analog input channels.

*Note: This field is non-editable. To edit the channel names, use the device list view control or use Dante™ Controller.

Pre-amp Control
The pre-amp Control section allows the user to adjust the microphone pre-amp gain settings and phantom power states for the corresponding inputs.

Input Select Control
The unD6IO features an input selection option for the line level analog inputs routed to Dante™ transmitter channels 3 and 4. To select the active input, click on the desired radio button in the Input Selection control.

The selectable options are:
- Input A (RCA Input)
- Input B (3.5mm TRS input)
- A+B (Sum of both inputs A and B)

New units (serial# 19052001-001 or later) mono mix the unbalanced inputs and the input select allows a choice of which mono-mix comes out each Dante channel (see below).

Older units prior to serial# 19052001-001 retain the stereo imagery so the input select for channel 3 selects which “Left” audio is selected for Dante channel 3 while input select for channel 4 selects which “Right” audio is selected Dante channel 4 (see below).
Dante™ TX Channel Status
This text field reports the number of active Dante™ receive devices for the corresponding transmitter channel. If no devices are subscribed to the transmitter channel the text field will report None.

*Note: This is a read-only field and any channel routing configuration must be performed within Dante™ Controller

Outputs

Dante™ RX Channel Name
This text field reports the Dante™ receive channel name shown on the Dante™ network for corresponding analog output channels.

*Note: This field is non-editable. To edit the channel names, use the device list view control or use Dante™ Controller.

Output Volume/Mute Control
The unD61O features volume and mute controls on the outputs. to adjust the output volume, drag the slider controls or directly enter the desired volume setting in the volume text box. The valid volume range is -60dB to 0dB in 1dB steps.

To mute the outputs, click on the Mute checkbox.
RX Channel Assignment
This text field reports the currently assigned Dante™ transmit channel to the corresponding receive channel. If no channel is assigned, the text field will report None.

*Note: This field is non-editable. To edit the channel names, use the device list view control or use Dante™ Controller.
