

# Q-SYS REFLECT

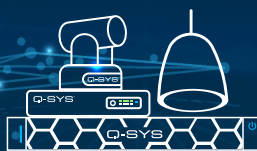

## Cloud-based monitoring and management for your Q-SYS systems

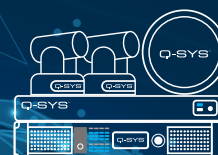

Location 1

Location 2

Location 3

# Ensure maximum uptime for your AV infrastructure

Now included with every Q-SYS system, Q-SYS Reflect provides detailed, real-time information about every connected device, including native Q-SYS and third-party, making it simple for you to make quick decisions and deliver confidence for your users.

## Reliability & Uptime

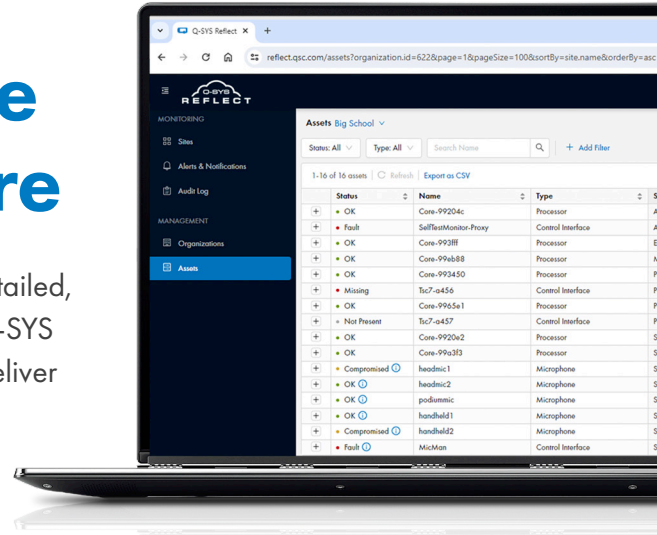

- Monitor the health of your systems for all connected Q-SYS and third-party devices
- Integrate custom alerts and notifications within your daily workflow (Slack, Microsoft Teams, Outlook, etc.)

## Security & Continuity

- Deploy security patches (one system at a time), without changing firmware
- Improve usability and authentication with Single Sign-On (SSO)

## Data & Insights

- Gain real-time visibility into AV system performance, status, trends, and inventory through Q-SYS Reflect native data.
- The free Q-SYS Reflect API extends comprehensive AV system data to your existing IT/building management platform, with no limits on use.

## Q-SYS Reflect **Plus**

In addition to the capabilities of Q-SYS Reflect, you get:

### Accelerate issue resolution with users in the room

- Fix issues without being on-site via Remote User Control Interface (UCI)

### Configure your Q-SYS system from anywhere

- Update Q-SYS design files and deploy the latest firmware, with automatic backup to the Cloud
- Simplify deployment of duplicate space types with saved presets (preview feature)

### View your entire AV/IT infrastructure from a unified dashboard

## Feature Overview
